

Meeting the challenge of sustainable design.

"Daniel Williams's *Sustainable Design* is . . . a thoroughly practical call for the design professions to take the next steps toward transformation of the human prospect toward a future that is sustainable and sustaining of the best in human life lived in partnership not domination."

—From the Foreword by David W. Orr, the Paul Sears Distinguished Professor of Environmental Studies and Politics and Chair of the Environmental Studies Program at Oberlin College

"In this pioneering book, Daniel Williams provides the sort of intelligent, thoughtful, experienced insights that—if followed—will ensure that we make the right choices. It should be on the desk of every architect in the world."

—Denis Hayes, president and CEO of the Bullitt Foundation and coordinator of the first Earth Day in 1970

Architects identify "sustainability" as the most important change in the future of their profession. *Sustainable Design: Ecology, Architecture, and Planning* is a practical, comprehensive guide to design and plan a built environment compatible with the region's economic, social, and ecological patterns.

In this book, Daniel Williams challenges professionals to rethink architecture and to see their projects not as objects but as critical, connected pieces of the whole, essential to human health as well as to regional economy and ecology. Comprehensive in scope, *Sustainable Design* answers key questions such as:

- How do I begin thinking and designing ecologically?
- What is the difference between "green design" and "sustainable design"?
- What are some examples of effective change I can make that will have the most impact for the least cost?

Written for architects, planners, landscape architects, engineers, public officials, and change agent professionals, this important resource defines the issues of sustainable design, illustrates conceptual and case studies, and provides support for continued learning in this increasingly central focus of architects' and urban planners' work.

Williams's book features winning projects from the first decade of the AIA's Committee on the Environment (COTE) Top Ten award program.

Contents:

Foreword by David W. Orr

Foreword by Donald Watson, FAIA

Preface

Acknowledgments

Introduction

Part 1

CHAPTER ONE: The Ecological Model

Ecology

Ecology as a Model

Waste Debts

The Value of Land

Paradigm Shift

Thinking as a System: Connectivity, Not Fragmentation

CHAPTER TWO: Sustainable Design

Where Do We Want to Go?

Design Matters

Why Architects?

Green Design versus Sustainable Design

Why Now?

Approaching Sustainability

Place-Based Energy and Resources

Principles for Designing Sustainably

Where to Start?

CHAPTER THREE: Regional Design

Evolving from Nonrenewables

Another Weak Link: The Power Grid

The Regional Design

Water: A Common Denominator

Make No Small Plans

The Regional Design Process

Regional Case Studies:

- Cache Valley, Utah
- Farmington, Minnesota: Building within the Community Watershed
- Smart Growth: Southeast Florida Coastal Communities

CHAPTER FOUR: Sustainable Urban and Community Design

A Matter of Place

Principles for Sustainable Communities

Regional Ecology and Biourbanism

Sustainable Urban and Community Case Studies:

- Lessons from Belle Glade: Can We Save the Everglades and Sustain Agriculture?
- Rio Nuevo Master Plan
- Growing the Great River Park

CHAPTER FIVE: Architectural Design

The Site: Challenges and Opportunities

Site Design and Environmental Analysis

Sustainable Infrastructure

The Skin

Evolving a Sustainable Design Practice

Sustainable Design and Existing Buildings

Sustainable Interior Architecture

Part 2

CHAPTER SIX: The AIA/COTE Top Ten Green

Projects Program

1997 AIA/COTE Top Ten Green Projects

1998 AIA/COTE Top Ten Green Projects

1999 AIA/COTE Top Ten Green Projects

2000 AIA/COTE Top Ten Green Projects

2001 AIA/COTE Top Ten Green Projects

2002 AIA/COTE Top Ten Green Projects

2003 AIA/COTE Top Ten Green Projects

2004 AIA/COTE Top Ten Green Projects

2005 AIA/COTE Top Ten Green Projects

2006 AIA/COTE Top Ten Green Projects

Afterword

About the Author:

Daniel E. Williams, FAIA, a Seattle-based architect and urban planner, is a nationally recognized expert in sustainable architecture and planning. Williams was the 2003 chair of the AIA's Committee on the Environment (COTE), and he chaired the AIA Sustainable Task Group in 2006. His projects, which range from residences to regional plans, connect ecology, economic development, transportation, agriculture, education, and natural resource protection.
